# Mean heating and gas storage are different observables

Run: completed | Validation: True | Periodic: True | Mean thermal: False

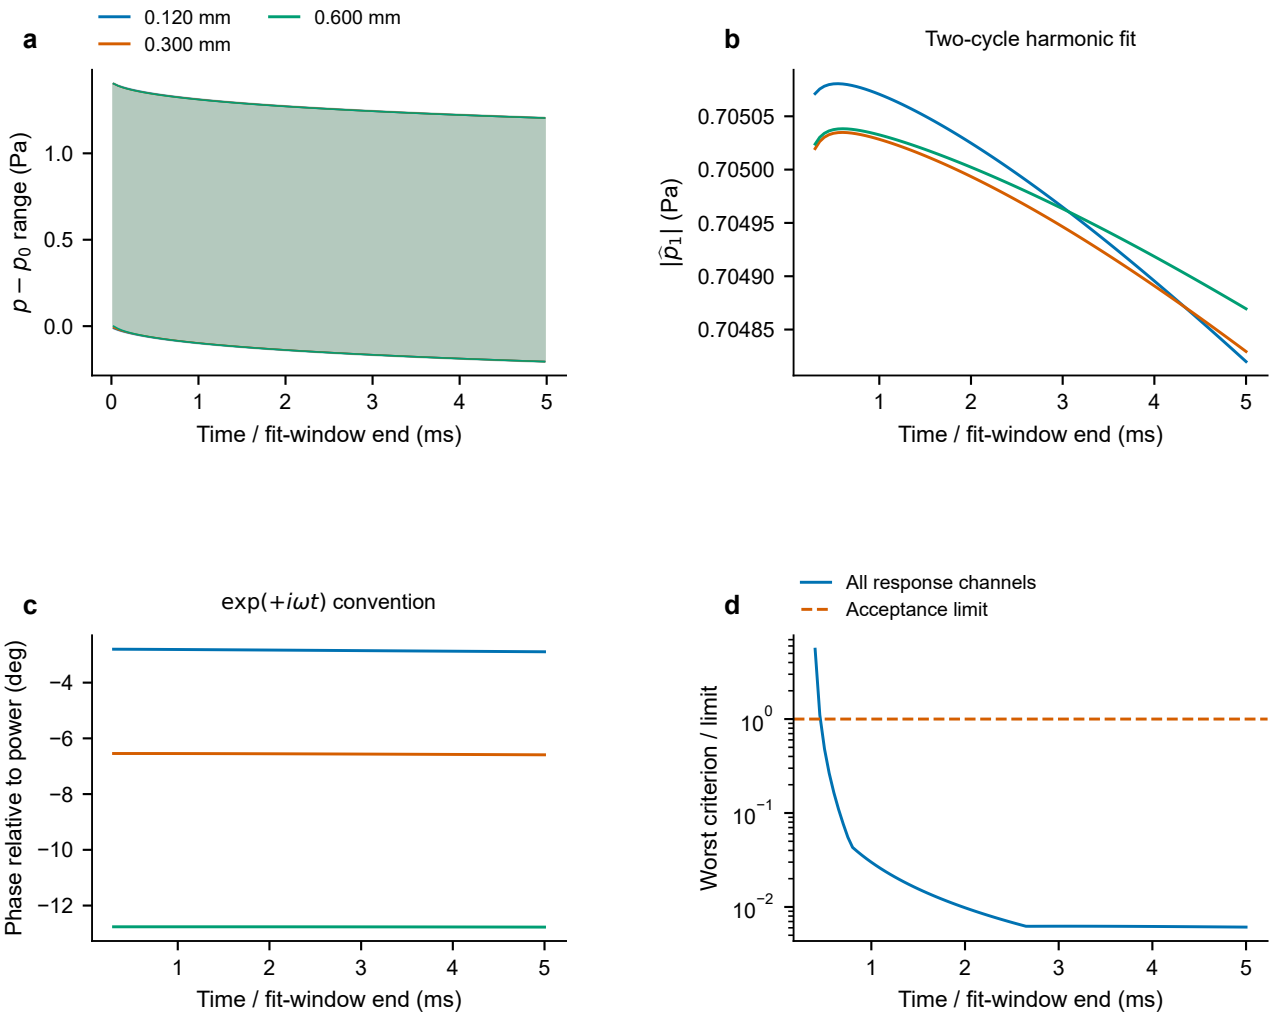

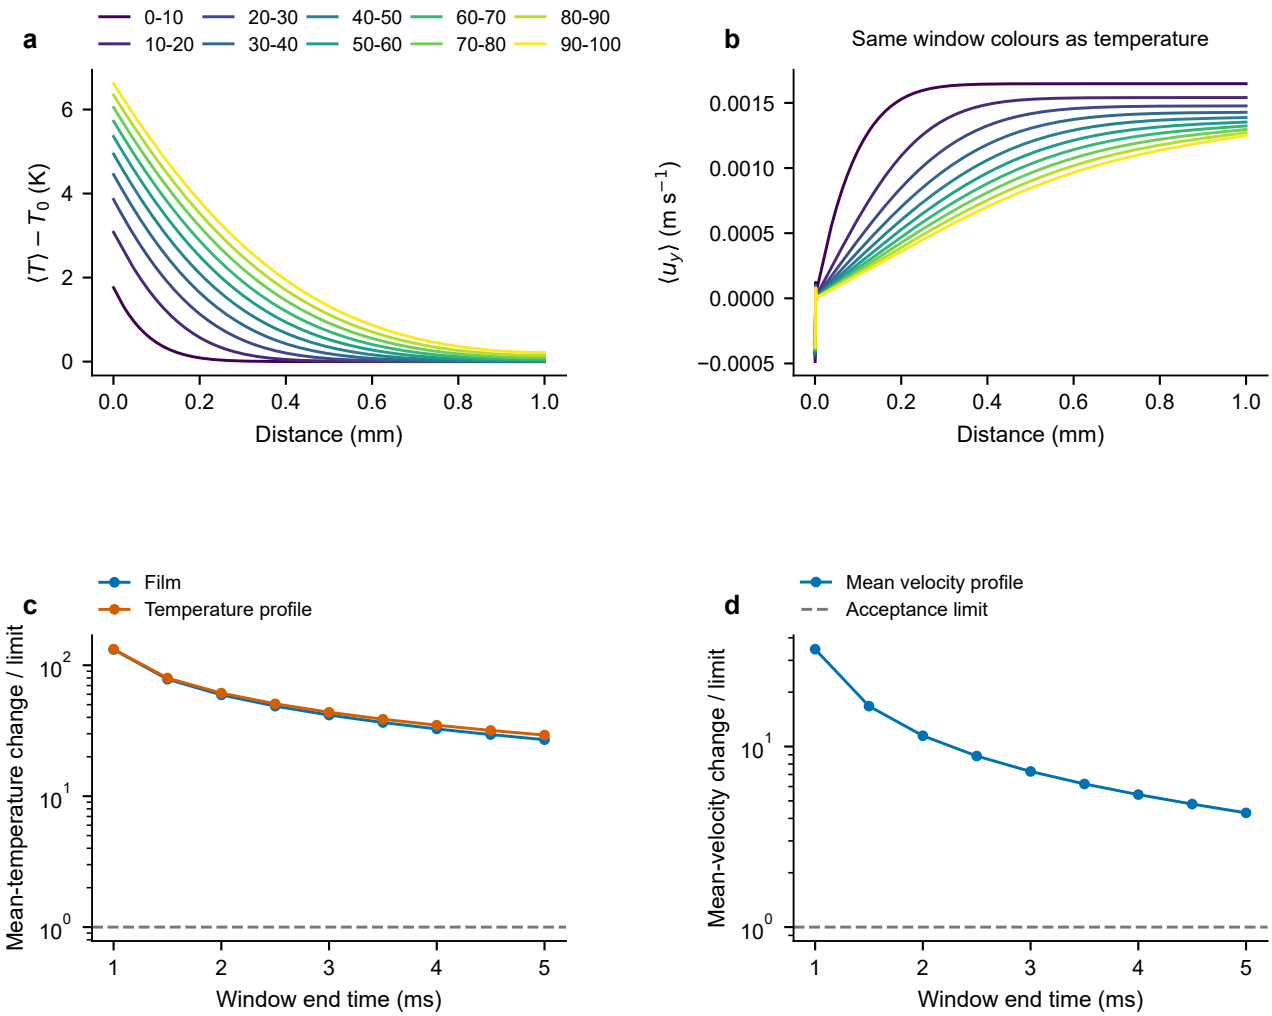

# Acoustic response from startup through the full observation

Run: completed | Validation: True | Periodic: True | Mean thermal: False

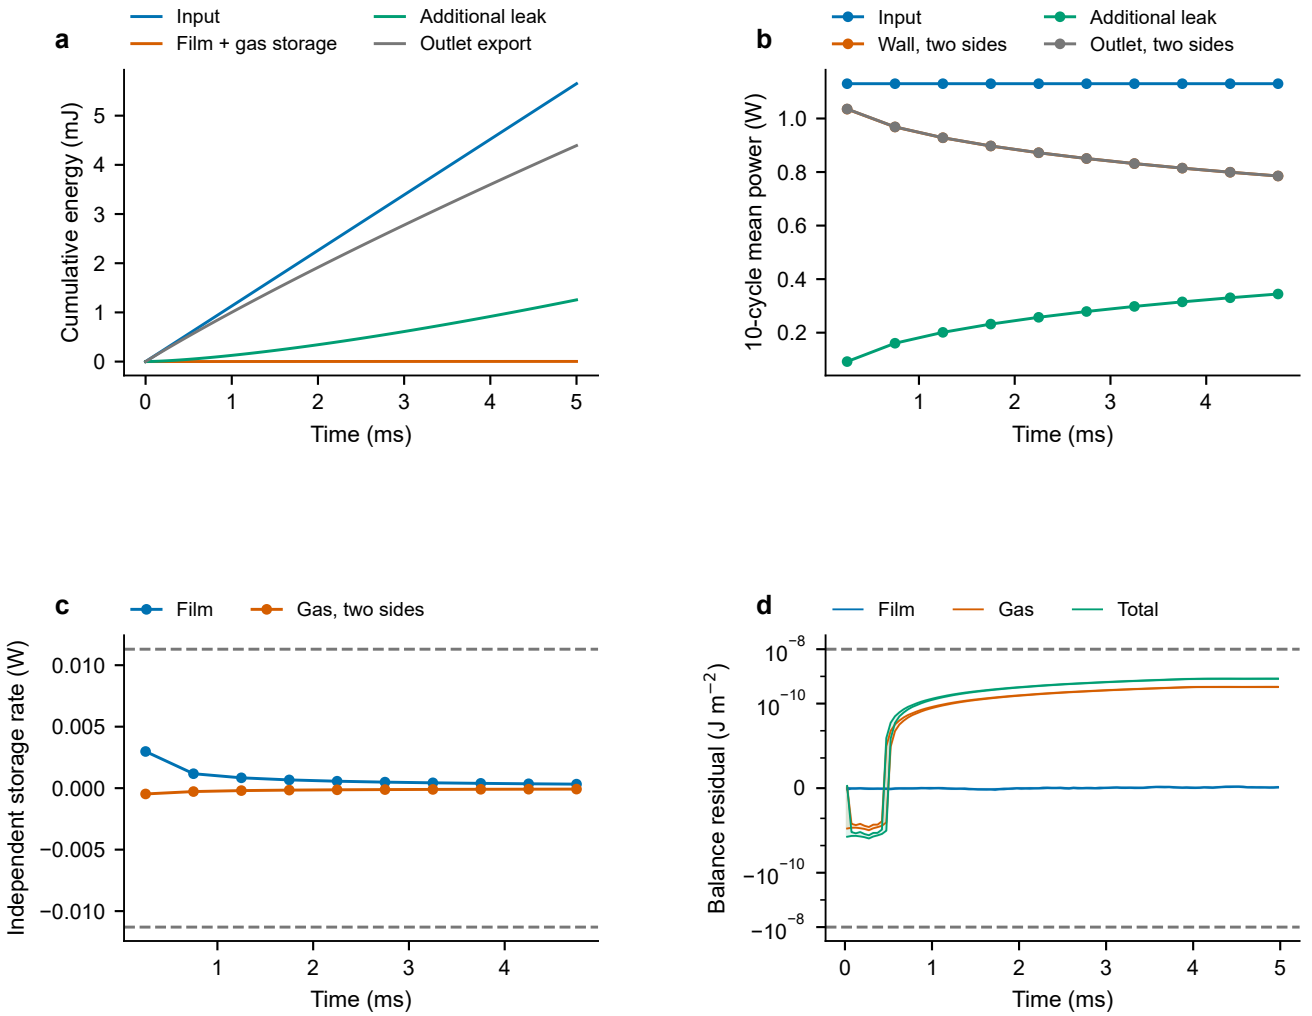

# Ten-cycle means test continued thermal and flow evolution

Run: completed | Validation: True | Periodic: True | Mean thermal: False

# Actual energy exchanges close against independent storage

Run: completed | Validation: True | Periodic: True | Mean thermal: False

# Outlet background: changes relative to the cold reference

Run: completed | Validation: True | Periodic: True | Mean thermal: False
